

PE/Cyanine5.5 Anti-Mouse F4/80 Antibody

Catalog Number:	202513, 202514
Size:	25 tests, 100 tests
Target Name:	EMR1, Ly71
Regulatory Status:	RUO

PRODUCT DETAILS

Clone:	BM8
Application:	Flow Cytometry
Reactivity:	Mouse
Format:	PE/Cyanine5.5
Isotype:	Rat IgG2a
Antibody Type:	Monoclonal
Formulation:	Phosphate-buffered solution, pH 7.2, containing 0.09% sodium azide and 0.2% (w/v) BSA
Protein Concentration:	Supplied at a lot-specific concentration.
Storage&Handling:	The antibody solution should be stored undiluted between 2°C and 8°C, and protected from prolonged exposure to light. Do not freeze.
Recommended Usage:	For flow cytometric staining, it is recommended to use 5 µL of this reagent per 0.5-1.0 million cells in a 100 µL volume. Optimal reagent performance should be determined by titration for each specific application. PE/Cyanine5.5 has an excitation max at 565 nm and an emission max at 670 nm.
Excitation Laser:	Blue Laser (488 nm) Green/Yellow laser (532/561nm)
Isotype Control:	303510

BACKGROUND INFORMATION

F4/80 is a 160 kDa cell surface glycoprotein and a member of the epidermal growth factor (EGF)-transmembrane 7 (TM7) family of adhesion G-protein-coupled receptors. Also referred to as EMR1 or Ly71, F4/80 is a well-established marker of murine macrophages. It is broadly expressed on the majority of tissue-resident macrophages, including peritoneal macrophages, lung macrophages, gut lamina propria macrophages, thymic and bone marrow stromal macrophages, splenic red pulp macrophages, Kupffer cells in the liver, and Langerhans cells in the skin. Notably, F4/80 is absent from macrophages located in T cell zones of the spleen, lymph nodes, and Peyer's patches. It has also been detected on a subset of dendritic cells, reflecting its heterogeneous expression pattern that can vary with macrophage maturation and activation
